Smart Pour™ Variable Temperature Kettle

The Brewista Smart Pour™ Variable Temperature Digital Kettle does it all for you. Made of 25 gauge 300 series stainless steel, the Smart Pour™ is built to last. Precise digital control heats water to within one degree, plus or minus. The current water temperature is displayed and can be changed from Celsius to Fahrenheit at the push of a button. Auto-start feature lets users set the time at which the kettle will reach the selected temperature and the auto-off function keeps you safe by shutting down if left unattended for over 60 minutes. With a precise keep warm feature the set temperature will be maintained for up to one hour. Its latte art inspired gooseneck spout pours with ultimate accuracy. A generous 1.2 liter capacity, redesigned easy grip handle and lift off base (no cord to interfere with pouring) make it perfect for serving all day.

Removable power cord in markets outside of North America.
